Piedmont Fiberglass has created the Triple Seal baptistery window installation system.

We use 3 surfaces to seal the window in our baptisteries.

Instead of using simple caulking, PFI utilizes Sikaflex adhesive to permanently bond the window into the baptistery.

The triple seal process is more difficult to manufacture and using an adhesive is more expensive. But….. it’s better to spend a few dollars now than risking thousands of dollars in damage from a leaking baptistery window.

Standard on all Window Model Baptisteries
